

Success stories

Employees Of Health Centers Identifying Potential Victims Of Trafficking.

Tirana and Shkodra mobile units of the organisation Different & Equal provide various services and outreach activities dedicated to the identification of cases of trafficking.

An indicator of the achievements of the efforts of the Mobile Unit has been the fact that for the first time the Health Centers have been mobilized against the phenomenon to report and refer cases related to trafficking in human beings. During January and February 2021, the Shkodra Unit held eleven meetings with the staff of the health centres, providing information on indicators related to the exploitation and trafficking of human beings.

These health structures have resulted as very important resources as one of the Health Centers of the Municipality of Shkodra has identified 3 cases of potential victims of trafficking. An indicator of mobilization against the phenomenon by reporting and referring cases related to trafficking in human beings. The staff of these centers express the desire to help people at risk of trafficking, especially in cases where the necessary information about their rehabilitation opportunities is lacking.

In their daily work, mobile units cooperate with local institutions and community actors who have information on the residents in the areas where they live. Besides the meetings with health centres, information sessions have been held with social services, community centres, school staff and students, Egyptian community members, and others.
